

ACH550-01/02

The introduction of a dedicated ABB drive for HVAC marks a significant milestone in AC Drives. Macros for the most common applications are built into the new drive as standard. selecting the application takes only seconds. The rest of the start-up is intuitive, with a user interface as simple to use as a mobile phone.
The Drive is programmed with several HVAC applications, including supply and return fans, cooling tower fans, booster pumps and condensers. The intelligence within the HVAC control panel means that the user is given direct and understandable instructions in clear text at all times.

400V

VLT Series

The new VLT® VAC Drive is the latest series of VAC drives from Danfoss with built-in intelligence.

The VLT® VAC Drive has a vast number of functions developed to meet the diverse needs of the HVAC business. It is the perfect match for pumps, fans and compressors in modern buildings that are fitted with increasingly sophisticated solutions. The VLT® VAC Drive series available in the power range 1.1 kW to 37 kW designed for all HVAC applications. An advanced drive built on HVAC dedication.

SED2-Series

With integrated class B filter

All the features you would want from an advanced HVAC variable speed drive

- Integrated communication for fast and easy network integration
- LG-Ni-1000 Sensor input with autoconfiguring of field devices
- Built-in PID for fast and accurate pressure control using pumps and fans
- Low harmonics design reduces noises and interference
- Pump cascading with up to 3 pumps
- Parameter assignment matched to user needs
- Belt failure detection without an external sensor
- Essential service mode for applications requiring continuous, uninterruptible operation
- One common interface throughout all power ranges
- Optional plain text operator panel with copy and time scheduler function
