

MicroNet View Software

MicroNet View is a software platform that provides an intuitive, graphical interface for network-level supervisory and control functions. MicroNet View works on any of the MicroNet network options, LonWorks® FTT-10 Free Topology, NCP (Native communications Protocol), and ARCNET, and works with the MicroNet family. MicroNet View supports also Satchnet range products such as IAC controllers and third party products such as chillers, boilers and access control systems.

Features

MicroNet View

- Real-time data on active, multi-media graphical displays
- Provides intuitive operation via customised control panels
- Support for DDE, and fast DDE standards
- Supports the use of bitmaps, photos, and other graphic formats when designing the network reporting display
- Comprehensive logging and alarm management utilities

MicroNet View Pro

- Allows graphics generation and development of the application
- Powerful scripting editor for creating and performing system tasks
- Use of ActiveX® Controls and Wizards makes the system configuration easy
- Allows monitoring and editing of system variables
